## SEMINARI DISA

# MODELLING THE VALUATION OF GIGA-INVESTMENTS: A FUZZY APPROACH

PROF. MIKAEL COLLAN  
IAMSR-Abo Akademi University  
Turku - Finland

**Sala riunioni DISA**  
Facoltà di Economia

**Venerdì, 14 ottobre 2005 – ore 10.30**

Very Large Industrial Investments are a special group of investments that have characteristics which effect their profitability. These characteristics should hence be taken into consideration when designing models for analysis of their profitability. We will discuss the special characteristics of very large industrial investments and how to model their profitability by utilising fuzzy logic and real option valuation. Some new advanced models are presented briefly. The session will close with a discussion.
